PMC Input Modules 700 and 710 are members of Intellitec's Programmable Multiplex Control family. They work in combination with the PMC CPU and other standard, semi-custom, or custom I/O modules.

This module has ten input connections for rocker or push-button switches and is intended to be used when back-lit switches are scattered. When switches are located in a group, consider the 906 and 909 switch adapters.

A connection for back-lighting is provided for each switch. The switch back-light lamps are controlled by the module. When the switch is off, half of the battery voltage is supplied to the lamp for back-lighting. When the switch is turned on, full battery voltage is applied to the lamp.
