Control Your Slide Outs

HOW IT WORKS

To operate the room, the owner would simply press and hold the button in the desired direction(In or Out). With the jumper in the default setting, there is delay in operation of the slide-out to allow for a voice announcement that the slide-out is in motion.

The motion of the slide-out may be stopped at any time by releasing the button. When the slide out reaches it's outer most limit, the unit will sense the rise in current and switch off the power to the slide out motor.

To move the room back in again, the owner will press and hold the button in the desired direction. Again, there is a short delay in operation of the slide-out to allow for a voice announcement that the slide-out is in motion. When the slide out reaches it's inner most position, the controller will sense the rise in current and will shut off power to the motor.

Slide Out Motor Control
Features

- Ignition interlock

- Press and hold operation

- With or without audible announcement in combination with or without delay of slide-out motion

- Current adjust is used to prevent damaging the motors or opening of the fuse or circuit breaker for the slide out unit

- The Controller can be operated with a rocker switch

- Can be used with Voice Audio Output with the addition of the Voice Output to Voice Module (00-00324-000)

- Dimensions (LxWxH): 4.25"x4.25"x1.38"

OPERATION & DIAGNOSTICS

Ignition

Voice Output to Voice Module (order separately 00-00324-000)

Rocker Switch/ Center Off (order separately)
